

Les fractions décimales

Après avoir visionné [cette vidéo](#), essayez de faire ces petits exercices. (ou sur mon site)

1. Décompose les fractions décimales comme l'exemple :

Exemple : $\frac{562}{100} = \frac{500}{100} + \frac{60}{100} + \frac{2}{100} = 5 + \frac{6}{10} + \frac{2}{100}$

$$\frac{456}{100} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

$$\frac{46}{10} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

$$\frac{456}{100} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

$$\frac{158}{100} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

$$\frac{86}{100} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

$$\frac{1223}{100} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

$$\frac{9}{100} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

$$\frac{132}{10} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

$$\frac{5686}{1000} = \frac{\quad}{\quad} = \frac{\quad}{\quad} + \dots$$

2. Décompose les fractions décimales comme l'exemple :

Exemple : $\frac{562}{100} = 5 + \frac{6}{10} + \frac{2}{100} = 5,62$

$$\frac{58}{10} = \dots + \frac{\quad}{10} =$$

$$\frac{9}{10} = \dots + \frac{\quad}{10} =$$

$$\frac{857}{100} = \dots + \frac{\quad}{10} + \frac{\quad}{100} =$$

$$\frac{158}{10} = \dots + \frac{\quad}{10} =$$

$$\frac{328}{10} = \dots + \frac{\quad}{10} =$$

$$\frac{58}{1000} = \dots + \frac{\quad}{10} + \frac{\quad}{100} + \frac{\quad}{1000} =$$

$$\frac{8756}{100} = \dots + \frac{\quad}{10} + \frac{\quad}{100} =$$

$$\frac{8}{10} = \dots + \frac{\quad}{10} =$$

$$\frac{129}{1000} = \dots + \frac{\quad}{10} + \frac{\quad}{100} + \frac{\quad}{1000} =$$

$$\frac{5856}{10} = \dots + \frac{\quad}{10} =$$
